Projects

1. devLab

DevLab is a real-time full-stack online IDE with AI support (Llama 3 - 70B) and live collaboration. It supports 20+ programming languages, making it ideal for team-based development.

2. Real Time Social Media Website

Designed and developed a feature-rich social media web application using JavaScript, enabling users to create posts, connect with friends, like and comment, and explore dynamic content feeds. Focused on responsive UI and user engagement features.

3. Real Time Chatting Website

This project is a real-time chatting website that allows users to communicate instantly with each other, one to another and one to everyone communication is also possible and multiple functions is also available like theme changer feature profile etc.

Career Objective

Aspiring MERN Stack Developer seeking an opportunity to apply my full-stack development knowledge in real-world projects. Passionate about building secure, responsive, and user-centric web applications while learning and growing with a dynamic team.
